

Team Swix,

The new year is here and racing is in full swing. Stay ahead of keeping your wax box filled with all the fast wax for the rest of the season by taking an extra 10% off all TS waxes for the month of January.

TS or Top Speed waxes are formulated fluoro-free, for racing. The TS line of waxes is available in both solids and liquids, in 5 different temperature ranges.

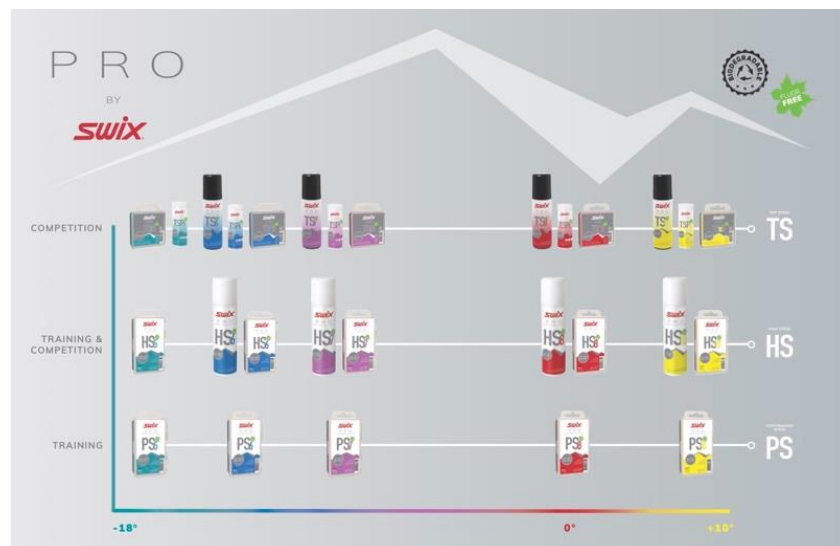

The TSP (powders) are the ideal choice for new snow, with the TSB being for old man made “dirty” snow. The spray liquids are a perfect choice for top coat temperature range adjustments during changing condition or as a touch up for that second run later in that afternoon.

Enter code: **TS10** at checkout for the extra 10% off you already in place discount.
Free shipping on all orders over \$249

Hello, Team Toko, and Happy New Year!

As the race season is upon us, I wanted to share a few details about Toko's brand-new line of High-Performance Powders, as well as some of our other new waxes that are sure to keep your skis happy!

High-Performance Race Powders

This is our highest-performing race wax for the 2023/2024 season. This high-speed race powder is based on the World Cup successes of Toko Sölden 15 Race Powder, which was available in a limited release over the last two seasons. If you want to go fast, you will want this powder in your wax box.

To apply:

1. First, wax your skis using a High-Performance hot wax for the day's temperature. Once the skis are cooled (minimum of 2 hours), scrape and brush the skis.
2. Shake High-Performance Powder onto your ski so that the entire base is coated with a layer of powder. Using enough powder helps create a protective buffer between the hot iron and your ski base and ensures even powder absorption.
3. Set the iron to 165° C and iron the powder with an iron speed of around 30 seconds from tip to tail for two passes. Let the wax cool, scrape, brush, and get ready to go fast!

Pro Tip: A high-quality iron such as the Toko T18 or T14 can hold a consistent temperature and are crucial to success.

TeamToko 40% off discount:

1. Go to: www.Tokous.com
2. Add products to the cart
3. At checkout, apply the code below to "My Promotional Code" and press apply
4. Promotional Code: **TEAMTOKO-3869**
5. Enjoy your Team Toko discount code all season long!

Other New Waxes for 2023/2024

- New this season is Toko's **Natural Speed Wax**, made from natural and environmentally friendly ingredients for superior gliding performance, all in a recyclable package. This wax is a fantastic way to prioritize eco-friendly values while maintaining speed on the snow.
- If you are anything like me, you use a *LOT* of **Base Performance Wax** throughout the season, whether training, racing, or preparing new skis to be as fast as possible. Fortunately, Base Performance waxes are now available in 960g boxes! That is eight bars of wax in eco-friendly bulk packaging, which includes significant savings compared to picking up non-bulk waxes.
